SUMMARY

Staff AI Engineer with 9+ years designing and deploying production AI systems across retail, healthcare, and digital marketing. Builds the platforms other teams build on — LLM frameworks, evaluation infrastructure, and root cause analysis systems adopted across engineering teams and driving multi-million dollar impact. Combines distributed-systems and ML infrastructure depth with the technical leadership to set AI standards at enterprise scale

EXPERIENCE

Walmart Global Tech - Sunnyvale, CA

AI/ML Engineer / Staff Data Scientist (Health & Wellness, Merchandising)

July 2026 - Present

- Shipped DRIFT — a pluggable rule engine surfacing anomalous merchant events (low sales, in-stock gaps) across 8+ analytical grains with LLM-synthesized executive reports, driving 47K analyst hours/year saved; architecting it into the signal-detection layer of a broader root-cause-analysis framework that composes traceable detection → causal attribution → action recommendation workflows across pricing, replenishment, and space teams, with attribution outputs feeding back to signal generators to form a continuous-improvement flywheel

AI/ML Engineer / Senior Data Scientist (GenAI, Merchandising)

May 2024 - June 2026

- Owned the evaluation platform underpinning Wally's LLMOps strategy — a multi-tenant system with Kafka priority queuing and offline/online workflows; cut feature-deployment cycles from 2 weeks to 3 days, reduced production defects 35%, and enabled 60% faster data-source onboarding across 15+ merchant-facing data warehouses
- Built a natural-language analytics engine that translated plain-language questions into structured semantic queries against a governed semantic layer, adopted by 1.2K merchants running 10K+ queries/month — 70% of whom previously depended on engineering-built dashboards — turning a repetitive ad-hoc request queue into self-service and freeing data experts to shape the knowledge layer instead of answering one-offs
- Set the LLM-application standard for 6+ engineering teams by designing a shared framework with agent orchestration, standardized interfaces, automated CI/CD, and OpenTelemetry tracing baked in — turning duplicated per-team infra into a single adopted library with continuous performance analysis
- Raised Wally GenAI satisfaction 47% → 79% through systematic prompt engineering, intelligent LLM routing, and advanced retrieval strategies — establishing the optimization playbook for merchant-facing AI features.

AI/ML Engineer / Data Scientist (Merchandising, Pricing)

July 2022 - April 2024

- Designed and implemented an enterprise-scale RAG conversational AI system using Langchain, Milvus vector database, and OpenAI API; built automated real-time embedding pipelines that achieved 83% retrieval accuracy and eliminated 20+ hours of monthly maintenance overhead
- Led migration of a critical Clearance Markdown data pipeline (150M combinations) to a scalable PySpark solution on GCP (Dataproc, Vertex AI), driving 80% adoption, cutting batch time from 3 hours to 30 minutes and enabling multi-million dollar savings through enhanced data processing for markdown decisions

Spectramedix - Gurugram (Haryana, India)

Data Analyst

March 2020 - July 2021

- Architected end-to-end data pipelines and interactive analytics dashboards using SQL and Tableau, facilitating streamlined referral optimization and real-time risk management monitoring
- Performed exploratory data analysis on healthcare claims datasets using SQL and Python, identifying risk patterns and developing predictive models that improved patient stratification accuracy by 25%
- Led cross-functional collaboration between technical and business stakeholders, driving successful implementation of ML-powered healthcare solutions while ensuring alignment with business objectives and regulatory requirements

Collegedunia Web Private Limited - New Delhi (Haryana, India)

Operations Manager / Analyst

June 2016 - December 2019

- Implemented A/B testing frameworks for ad placement optimization, leveraging statistical methods and intelligent monitoring systems, driving a 17% boost in lead generation and 12% revenue growth
- Developed a K-Means clustering recommendation system for targeted marketing campaigns, incorporating real-time user behavior data and adaptive feedback loops, reducing customer acquisition costs by 22%

EDUCATION

University of Texas at Austin | MS in Business Analytics | Austin, TX

May 2022

NIT Kurukshetra | B.Tech in Civil Engineering | Kurukshetra, India

May 2016

SKILLS

AI Competencies	RAG, Agents & Orchestration, PEFT & SFT, Prompt Engineering, Evaluations, LLM-as-a-judge
AI Stack	LLM Models (ChatGPT, Claude, Gemini), ADK, Langchain, MCP, Milvus, InspectAI, Phoenix
ML	Deep Learning, NLP, XGBoost, Random Forest, Classification, Clustering, Statistical Analysis
Data & Cloud	GCP (Vertex AI, Dataproc, BigQuery), Azure ML, PySpark, Kafka, Airflow, PostgreSQL, Redis
Libraries & Frameworks	PyTorch, TensorFlow, MLflow, FastAPI, scikit-learn, pandas, numpy, streamlit, SQLAlchemy
